The Accent 1400/1000/800 may all be connected to an External Computer via **InputStick** or a **mini USB cable**.

Mini USB Cable

InputStick

CONNECTING TO A PC VIA THE USB CABLE

Use the **USB** cable that came with your device to connect to an **IBM OR Macintosh** computer.

1. Turn ON your **computer** and **Accent** device.
2. Connect the mini-end of the **USB** cable to the mini **USB** port situated on the right side of the device.
3. Connect the other end to the **USB** port on your computer.
4. Go to **Toolbox** and select **Computer Settings**.
5. Set Output Status to **ON**.
6. Set Output Destination to **EXTERNAL**.
7. Set Connection Type to **USB**.
8. Set Output Mode to **IMMEDIATE**.
9. Leave Character Pacing **OFF**.
10. Set the Keyboard Language to **UK**.
11. Set Computer to either **IBM** or **MAC**. (Depending on what you are using)
12. Select **OK** to exit the Menu.
13. You may now open a Document within your **PC/MAC** and start using your overlay to type. You should be able to see the information appear on your computer screen.

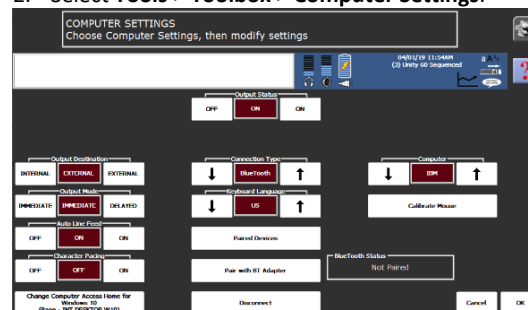

To check at any time whether **Output** is **ON** or **OFF**, look at the status **Display Area** on your device.

CONNECTING TO A PC VIA INPUTSTICK

The **InputStick** has a wide range. Your communication aid and the adaptor do not have to "see" each other like infrared devices do. You can be across the room from the computer in any direction and the connection will still be made.

1. Insert your **InputStick** into the **USB** port on the PC.
2. Select **Tools > Toolbox > Computer Settings**.

3. Set Output Status to **ON**.
4. Set Output Destination to **EXTERNAL**.
5. Set Connection Type to **InputStick**.
6. Set Output Mode to **IMMEDIATE**.
7. Leave Character Pacing **OFF**.
8. Set the Keyboard Language to **UK**.
9. Set Computer to either **IBM** or **MAC** (depending on what you are using).
10. Select the **Pair with InputStick** button.
11. Once paired, the Bluetooth Status box (in the right hand corner of the Menu) will state, "**Paired, Connected**". If the device displays "**Paired, not Connected**" go to Paired Devices, select the InputStick (this will show a MAC address combination of numbers & letters, e.g. D8:*.*.*.*.*) and press connect.
12. Select **OK** to exit the Menu.
13. Select **Go To Home**.
14. On your **PC/MAC**, open a word document or an application you can type into.
15. Now start typing using your overlay. You should be able to see the information appear on your computer screen.

****Important Note:** Once your InputStick has been paired with your computer, it will always pair even if you remove it from your PC & reconnect it at a later time.
